

Santa Fe Tightens Personal Data Protection Policy

Certification to ISO 27001:2005 is a powerful step for our organization toward the implementation and demonstrating compliance with internationally recognized best practices in Information Security. Santa Fe Relocation Services is pleased to announce that our Hong Kong operation has been awarded ISO/IEC 27001:2005 Information Security Management System certificate in January 2008. Santa Fe's Group strategy will be to roll-out ISO27001 to our operations in Beijing, Shanghai, Singapore and Japan in 2008 and the remaining offices in 2009 and 2010. This certification will ensure that we stay ahead as the leader in Asia in terms of meeting our customers requirement for the future.

This accomplishment enhances our existing certifications for Quality (ISO9001) and the Environment (ISO14001) by addressing information security management concerns. Information Risk management is the most spoken about topic today and it is vital that organisations not only understand what critical information assets they have but also how these assets should be protected. Santa Fe adopted the information security management system for business protection, risk management, service continuity and to meet regulatory and customer compliance. This is an untiring commitment to care and protection of the information and intellectual property owned by our customers, business partners and Santa Fe.

Santa Fe's Group strategy will be to roll-out ISO27001 to our operations in Beijing, Shanghai, Singapore and Japan in 2008 and the remaining offices in 2009 and 2010. This certification will ensure that we stay ahead as the leader in Asia in terms of meeting our customers requirement for the future.

"Stay secured. Stay assured....Santa Fe Relocations"
